EXP NO:6	Hotel Booking Workflows in Zoho Creator

Aim

To automate the hotel booking process in Zoho Creator using Form Workflows, Schedules, Approvals, Blueprints and Batch Workflows so that routine actions happen with minimal manual effort.

Theory

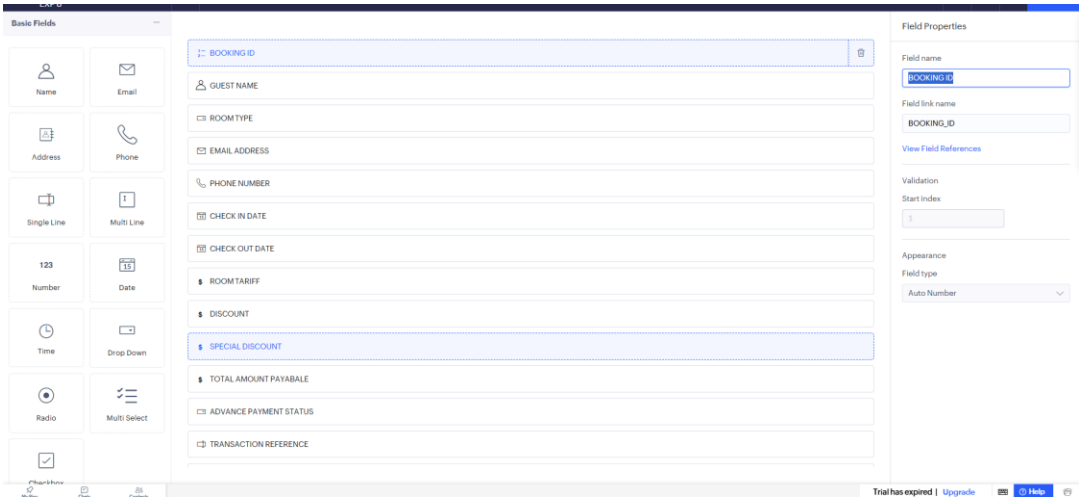

Workflows in Zoho Creator automate business logic. **Form workflows** run when a record is submitted, **Schedules** and **Batch workflows** run at a set time, **Approvals** add a manager checkpoint, and **Blueprints** enforce a controlled sequence of stages.

The booking form (EXP 6) contains Booking ID, guest name, room type, contact details, check-in and check-out dates, tariff, discount and payment fields used by these workflows.

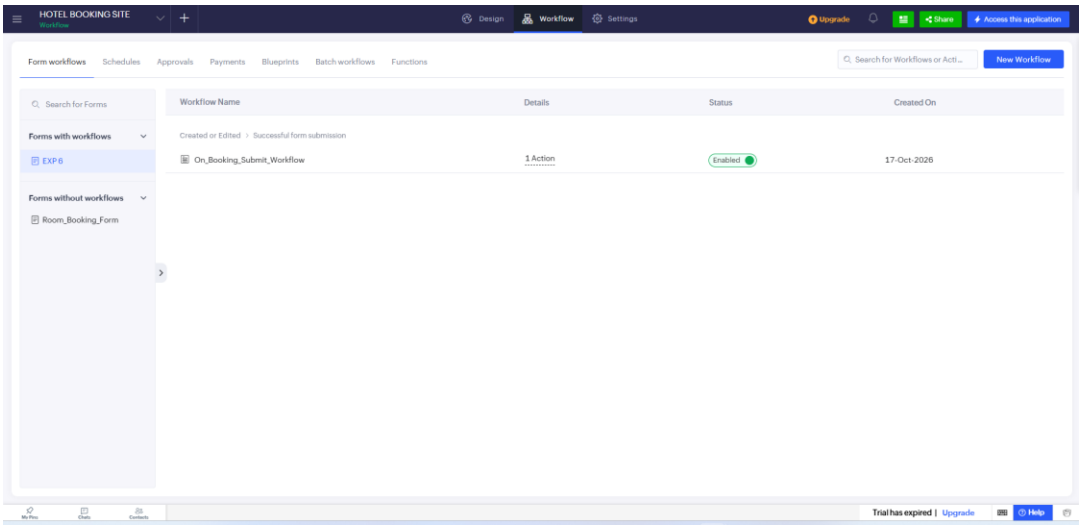

Workflows Created

Workflow Type	Workflow Name	Purpose
Form Workflow	On_Booking_Submit_Workflow	Confirmation on form submission
Schedule	Daily_Checkin_Reminder_Schedule	Reminder based on check-in date
Approval	Complimentary_Upgrade_Approval	Manager approval for upgrades
Blueprint	Booking_Lifecycle_Blueprint	Controlled booking stages
Batch Workflow	Bulk_Feedback_Request_Batch	Nightly feedback requests at 11:00 PM
