## Experiment 10 — Performance Optimization in Zoho Creator

### Aim

To study techniques used to improve the performance and responsiveness of applications developed using Zoho Creator.

### Theory

Performance optimization is the process of improving an application's speed, responsiveness and efficient use of resources.

### Techniques for performance optimization

1. **Optimize Deluge scripts:** Avoid unnecessary calculations and repeated operations in the hotel booking application.
2. **Reduce unnecessary data retrieval:** Retrieve only the booking records and guest details needed.
3. **Optimize reports:** Use suitable filters and avoid displaying unnecessary columns in hotel booking reports.
4. **Improve page design:** Avoid excessive components and complicated layouts in the hotel management application.
5. **Optimize workflows:** Avoid unnecessary workflow triggers and repeated actions for booking confirmations, check-in reminders and feedback notifications.
6. **Use efficient searches:** Apply appropriate criteria when retrieving booking records based on room type, booking status or check-in date.
7. **Monitor performance:** Test important booking forms, reports and workflows to identify delays.
8. **Avoid duplicate processing:** Prevent booking reminders, feedback notifications and other workflow actions from running unnecessarily.

### Benefits

- Faster page loading.
- Improved user experience.
- Reduced unnecessary processing.
- Better scalability as booking records increase.
- More efficient application maintenance.

### Application to the Hotel Booking System

For the Hotel Room Booking & Front Office Management application, reports can be filtered by booking status, room type or check-in date. Deluge scripts should perform only necessary operations, and workflows for booking confirmations, check-in reminders and feedback notifications should avoid repeated processing.

## Result

The major techniques and benefits of performance optimization in Zoho Creator were studied for the Hotel Room Booking & Front Office Management application.
