EXP.NO-4	Form Design for a Business Application(Advanced Fields)

AIM:

To extend the **Room_Booking_Form** in Zoho Creator using all 17 Advanced Fields, with appropriate validations, computed values, and a report for managing room booking requests.

INTRODUCTION:

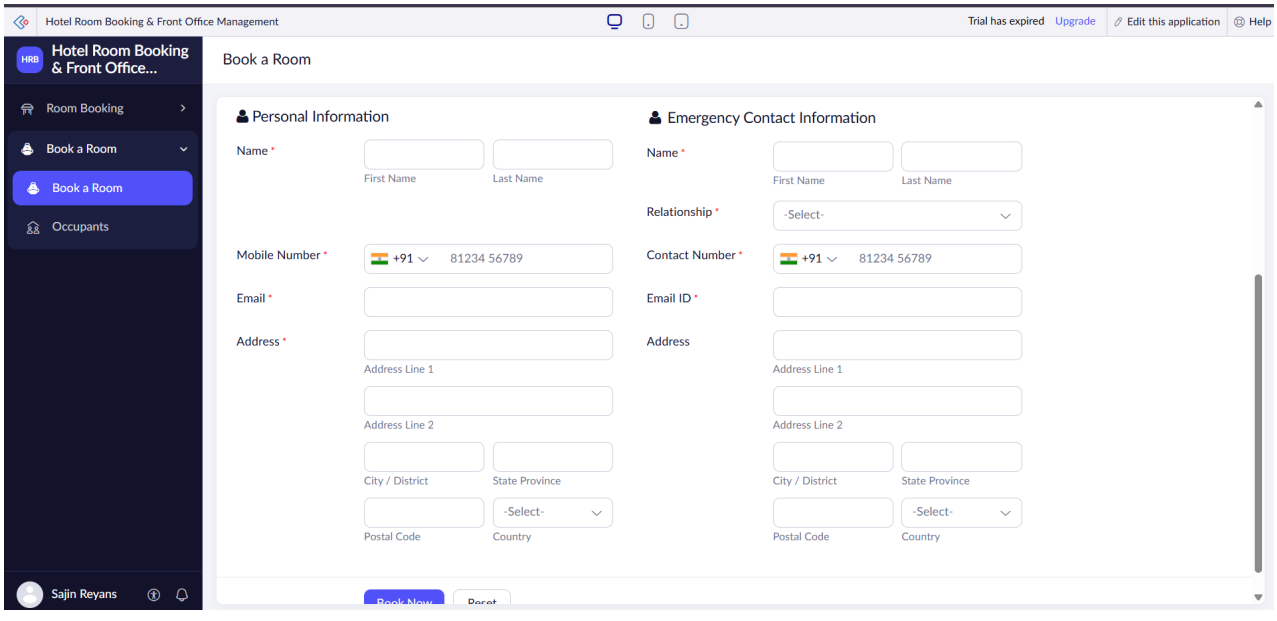

The application **Hotel Room Booking & Front Office Management (Advanced Edition)** extends the basic booking form so that it moves beyond data capture. The form supports room inventory lookup, group bookings through a SubForm, advance payment and balance computation, file and media uploads, and an automatically generated Booking ID with a scannable QR code. Mandatory fields and validation rules are applied to improve the accuracy and completeness of the collected information.

Hotel Room Booking System (Advanced Fields):

Field Name	Field Type	Purpose of Collected Data	Validation	Mandatory
Room_Type_Availability_Lookup	Lookup	Looks up and auto-fills the room tariff and availability status from the master Room Inventory table.	Connected to Room Inventory form; type-ahead search and select.	No
Guest_Photo	Image	Collects a photo of the primary guest for front-desk identity verification at check-in.	JPG and PNG only; maximum size 2 MB.	No
ID_Proof_Upload	File Upload	Collects a scanned copy of a valid government ID for check-in verification.	PDF, JPG and PNG only; maximum size 5 MB.	No
Distance_From_Airport_KM	Decimal	Collects the distance from the airport to the hotel, used to plan the pickup service.	Accepts decimal values (e.g., 14.5).	No
Additional_Guests_Details	SubForm	Collects repeating rows of co-traveler name, age, and ID type for group or family bookings.	Minimum 0 and maximum 5 rows per booking.	No
Travel_Itinerary_URL	URL	Collects a link to the guest's travel itinerary or flight booking confirmation page.	Accepts valid URL format.	No
Celebration_Request_Video	Video	Allows the guest to upload a short video message when requesting room decoration for an anniversary or birthday.	Maximum duration 45 seconds; maximum size 50 MB.	No
Special_Request_Voice_Note	Audio	Allows the guest to optionally record a short voice note describing special arrangements needed.	Optional audio recording.	No
Requires_Airport_Pickup	Decision Box	Collects a quick Yes/No decision on whether airport pickup service is needed.	Yes / No toggle; must be answered before submission.	Yes
Advance_Payment_Paid	Currency	Collects the advance payment amount paid by the guest at the time of booking.	Non-negative values only; formatted in INR (Rs.).	No
Loyalty_Discount_Percent	Percent	Collects the discount percentage applicable for returning or loyalty-program guests.	Value restricted to a range of 0 to 20.	No

Field Name	Field Type	Purpose of Collected Data	Validation	Mandatory
Total_Amount_Payable	Formula	Computes the balance amount due at check-in using the room tariff, discount, and advance paid.	Read-only; recalculated automatically when tariff, discount, or advance changes.	No
Hotel_Policies_Display	Rich Text	Displays formatted hotel policies (bold headings, bullet points, hyperlinks) within the form.	Read-only reference block.	No
Guest_Digital_Signature	Signature	Collects the guest's digital signature acknowledging the hotel's terms, conditions, and cancellation policy.	Must be signed before form submission.	Yes
Booking_Submitted_On	Date-Time	Automatically records the exact date and time the booking request was submitted.	Auto-captured on submission.	No
Booking_ID	Auto Number	Automatically generates a unique, sequential booking reference number for every reservation.	Prefix "HTL-BKG-", current year, and 6-digit auto-increment sequence.	No
Booking_Confirmation_QR_Code	QR/ Barcode	Automatically generates a scannable QR code encoding the Booking ID for quick check-in.	Auto-generated immediately after the Booking ID is assigned.	No

RESULT:

The **Extended Hotel Room Booking Form** was successfully created in Zoho Creator using all 17 Advanced Fields. The required validations and computed logic were configured, and submitted booking details with the auto-generated Booking ID and QR code were displayed in the **Room_Booking_Report**.
